

TORNO

Office-Shophouse

TORNO

TORNO is a contemporary lightning brand that offers a new perspective on craftsmanship and bespoke design, suitable for all audiences. We produce functional and aesthetic designs made of locally sourced natural materials that result in durable and quality products that provide added value to the users.

Each piece is brought to life through the skillful work of numerous artisans working with the highest quality materials, making every object unique and with an added story of tradition.

MATERIAL

Alabaster is a soft mineral rock with a unique translucency property that reveals brown clouding and veining when light travels through, providing warm and calm atmospheres.

Oak is a refined and exceedingly strong and durable wood with an excellent natural resistance due to the tannins it contains. Light brown in color with a prominent grain texture, it is a long lasting material that feels hard and smooth, the perfect companion for a contemporanean alabaster lamp.

TEAM

Office-Shophouse is a design practice led by Natalia Vera, Patxi Martin and Josep Garriga. After several shared educational experiences in different cultural contexts, this collaborative platform emerged from a common interest in addressing the relationships between craft and industry through design and architecture, and their crucial role in transformation of society.
